# 1. Important health problem

**Diabetes UK**  
2.4 million people in the UK have diabetes  
1 million don't know it yet  
You could be one of them. To find out more call 0800 996 1403

The poster features a silhouette of a person standing in a field of tall grass against a bright, hazy background. The Diabetes UK logo is in the top right corner.

# 2. Simple and safe test available

## Diabetes Risk Test

**TYYPIN 2 DIABETEKSEN SAIRASTUMISRISKIN ARVIOINTILOMAKE**

Responsi oikos valtuutteen ja luke pöytä-yhteen.

- Ikä**  
 1 p. 06-43 v.  
 2 p. 44-64 v.  
 3 p. 65-84 v.  
 4 p. 85 v. ja vanha
- Painoaikakausi**  
 (tuo tarkka paino kätöspainuista)  
 1 p. 06-25 kg/m<sup>2</sup>  
 2 p. 26-30 kg/m<sup>2</sup>  
 3 p. 31-35 kg/m<sup>2</sup>
- Vyökehäsuhteisuus** (yhtenä nahan kohdalla)  
 MIEHET      NAISET  
 1 p. alle 94 cm      alle 80 cm  
 2 p. 94 - 103 cm      80 - 88 cm  
 3 p. 104-113 cm      89-99 cm  
 4 p. 114-124 cm      100-110 cm
- Suolalyönti** jokainen päivä tai yleensä vähintään kaksi kertaa viikossa työssä jätetä vapausajalla tai arkielämässä muuten liikaa?  
 1 p. Kyllä  
 2 p. Ei
- Kuinka usein olet kaverit, hoidot tai matkustat?**  
 1 p. Päivittäin  
 2 p. Harvoin, kun joku pitää
- Oletko koskaan käyttänyt sääntöläisiä verensokerilukemia?**  
 1 p. Kyllä  
 2 p. Ei
- Oletko vatsatautiin joku todettu olevan heikolla (miten, vatsatautiin, jokin sairauden aiheuttama, ruokamato oikasta)?**  
 1 p. Kyllä  
 2 p. Ei
- Oletko jaksanut ottaa diabetes tyypin 1 tai 2 diabetes?**  
 1 p. Kyllä  
 2 p. Ei
- Käyttökäytännölläsi, vatsatautiin, ruokamato oikasta tai muulla tavalla on ollut vaikutusta, siinä on ollut vaikutusta?**  
 1 p. Kyllä  
 2 p. Ei

**Käsitteistö yhteensä**

Riski sairastua tyypin 2 diabeteskoon kymmenen vuoden kuluessa on

alle 7    Pieni arvo yksi tai kaksi sairautta  
 7-10    Jotkut sairautta kolme tai neljä  
 11-15    Keskivertoinen arvo yksi tai kaksi sairautta  
 16-20    Suuri arvo yksi tai kaksi sairautta  
 21-25    Hyvä arvo yksi tai kaksi sairautta

**Calculate score**    **Reset form**

**Diabetes Risk Test**

Please select your age category:  
 18-44     45-64     65 or older

Please enter your height:  
 feet     inches — or —     centimeters

Please enter your weight:  
 pounds — or —     kilograms

I am under 65 years of age AND I get little or no exercise.  
 True     False

I have a sister or brother with diabetes.  
 True     False

I have a parent with diabetes.  
 True     False

I am a woman who has had a baby weighing more than nine pounds (4,100 grams) at birth.  
 True     False

**Calculate score**    **Reset form**

Complete the questionnaire below to find out if you are at risk of developing type 2 diabetes.

Answer	Tick appropriate box	Score	
1. How old are you?	44 & under 45-49 50-54 55+	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	0 7 13 18
2. What sex are you?	Male Female	<input type="checkbox"/> <input type="checkbox"/>	4 0
3. What is your Body Mass Index (BMI)?	24 & under 25-29 30+	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	0 7 15

Use your height and weight to work out your Body Mass Index (BMI) using the graph below: e.g. 4 ft 10 ins 11 stone = obese class 1, i.e. BMI is over 30 therefore score 15.

Answer	Tick appropriate box	Score	
4. Have you been diagnosed with high blood pressure?	Yes No	<input type="checkbox"/> <input type="checkbox"/>	10 0
5. Are you physically active in your leisure life? <i>e.g. 30 minutes of moderate physical activity, such as brisk walking, at least 5 days a week</i>	Yes No	<input type="checkbox"/> <input type="checkbox"/>	0 6
6. Are either of your parents diabetic?	Yes No	<input type="checkbox"/> <input type="checkbox"/>	7 0
<b>TOTAL (max 60)</b>		<input type="text"/>	

**SCORE RANGES**  
 If you have a total score of 31 or more you may be at increased risk of having undiagnosed diabetes. Please consider following the advice below and overleaf to arrange a simple blood sugar test at a local pharmacy, or discuss the result with your practice nurse.

## Identify diabetes early

Diabetes causes elevated levels of sugar in the blood and may run in families. Untreated diabetes may cause damage to the heart, eyes, kidneys and feet. Early diagnosis and treatment can reduce the risk of complications.

Some of the signs of diabetes include always feeling tired, being irritable, being thirsty, passing urine excessively and getting infections and numbness in the feet.

See overleaf

# 3. Potential harms

# 4. Effective treatment for individuals detected early

Diabetes detectable  
in the blood

Diabetes detected  
by screening

Diabetes detected  
clinically

**0 years**

**~4 years**

**~8 years**

Diabetes detectable  
in the blood

Diabetes detected  
by screening

Diabetes detected  
clinically

**0 years**

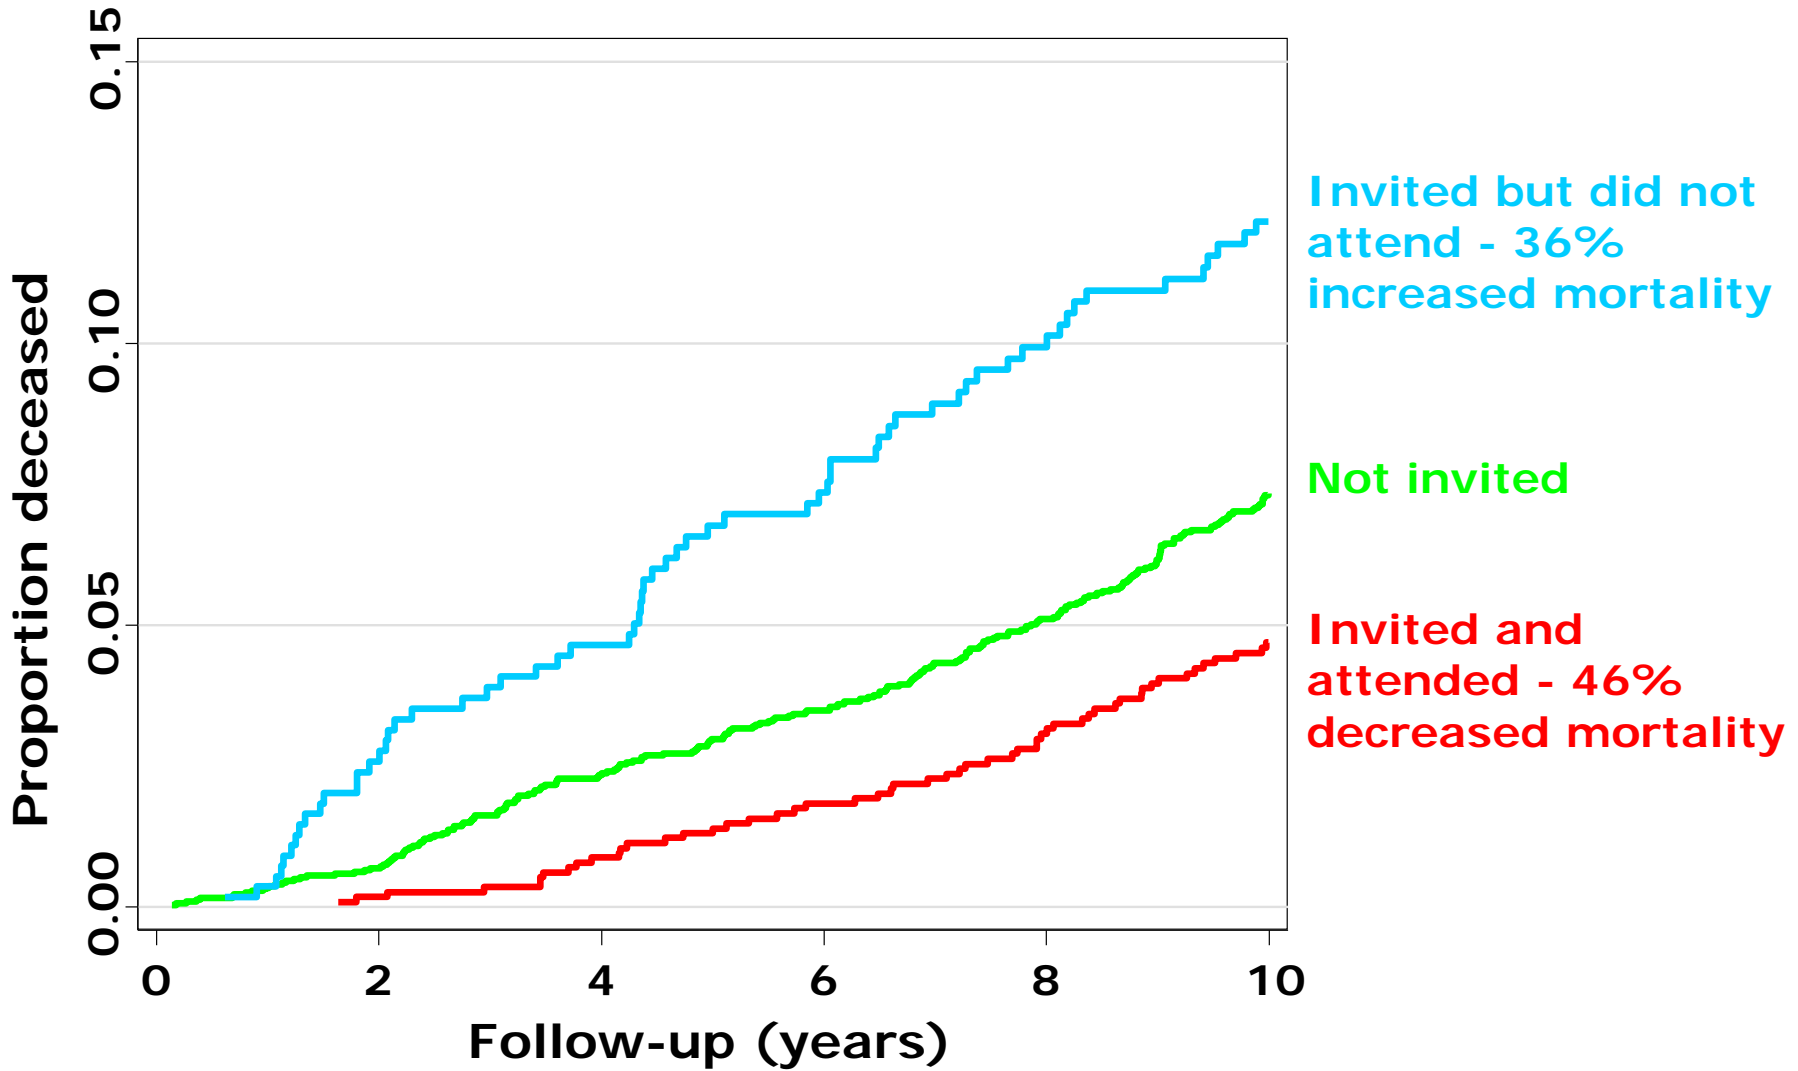

**~4 years**

**~8 years**

If we find and treat people earlier, can we reduce the chance of them dying early and/or suffering from heart attacks and strokes?

# Mortality by Attendance at Screening in the Ely cohort 1990-1999

# **3. *ADDITION- Cambridge***

# Aims

- To evaluate the feasibility of stepwise screening programs to identify individuals with undiagnosed diabetes
- To assess the feasibility of the delivery of intensive treatment of risk factors in people with screen detected diabetes
- To evaluate the effectiveness in primary care of early *intensive treatment* compared to *routine care* on cardiovascular outcomes

# 55 practices in the Eastern Region

28 practices  
screening and intensive  
target driven management  
of risk factors

27 practices  
screening and  
routine care

1 year

Assessment of CVD risk  
among screen-detected diabetic patients

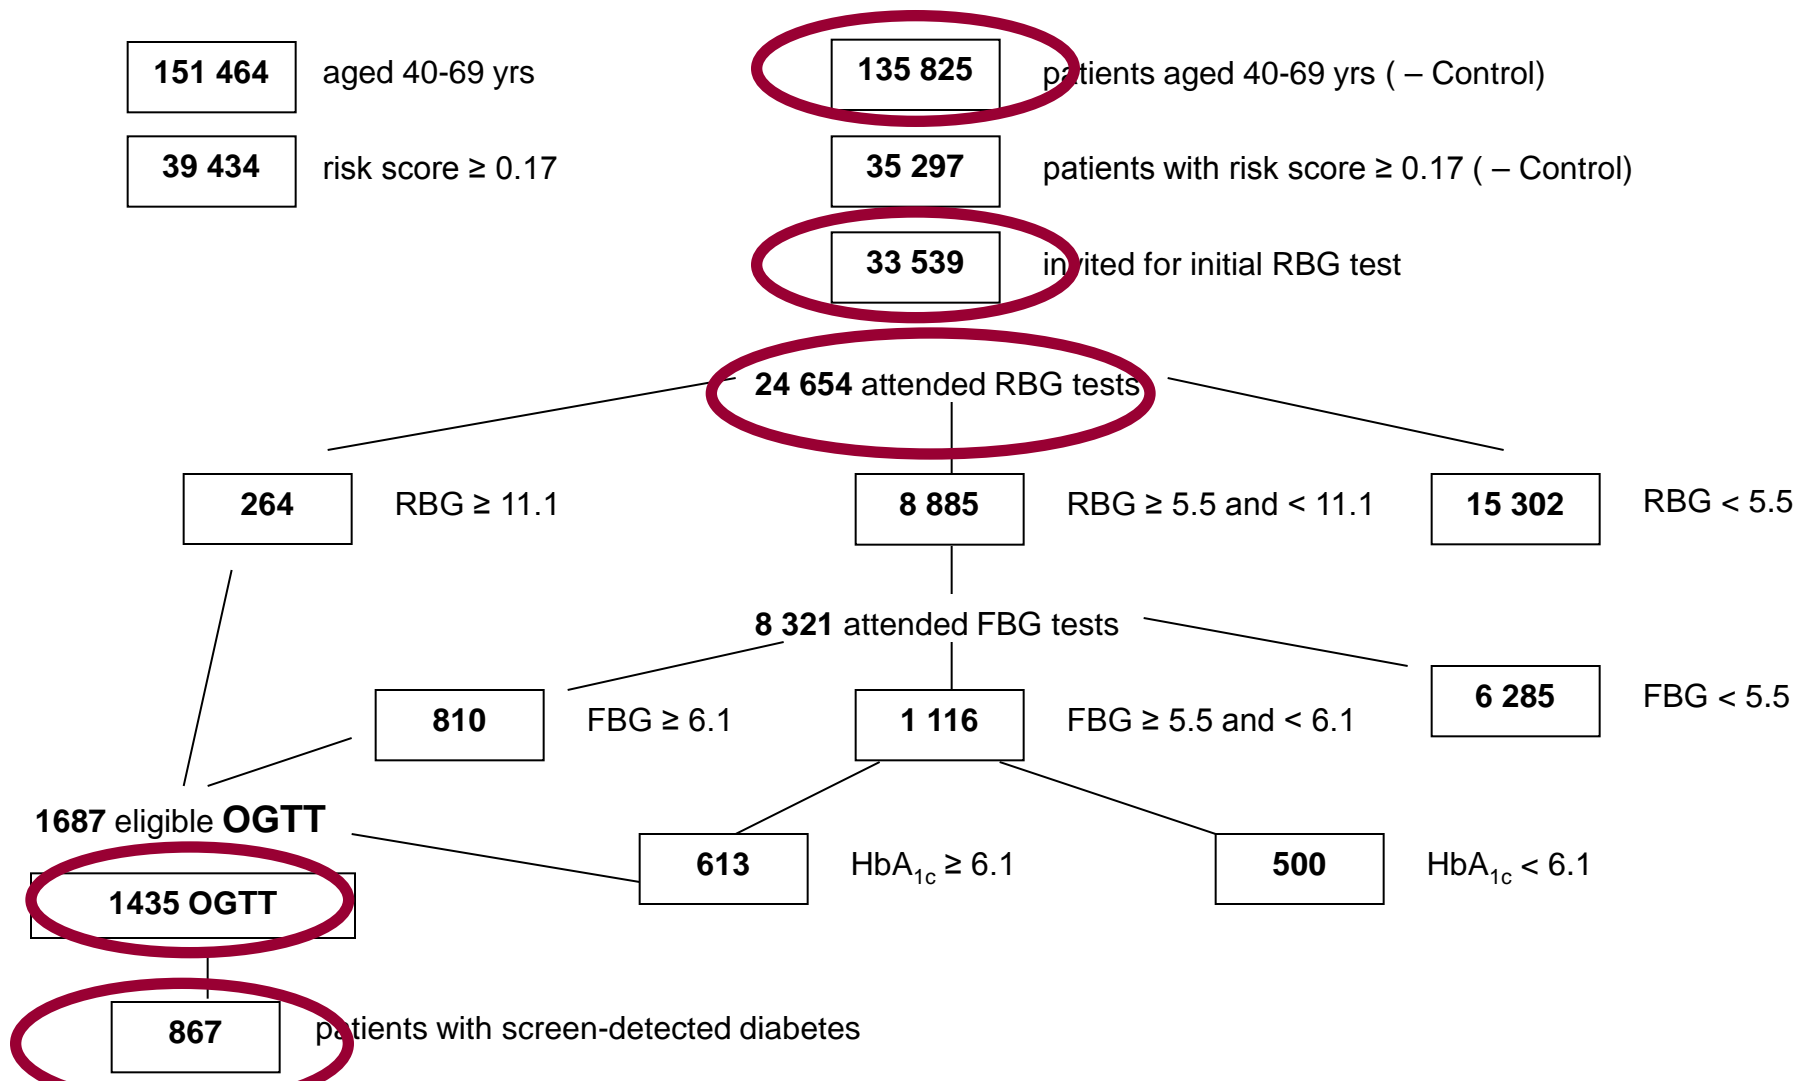

5 years

Assessment of CVD events and mortality  
among screen-detected diabetic patients

# Screening programme

# Intervention

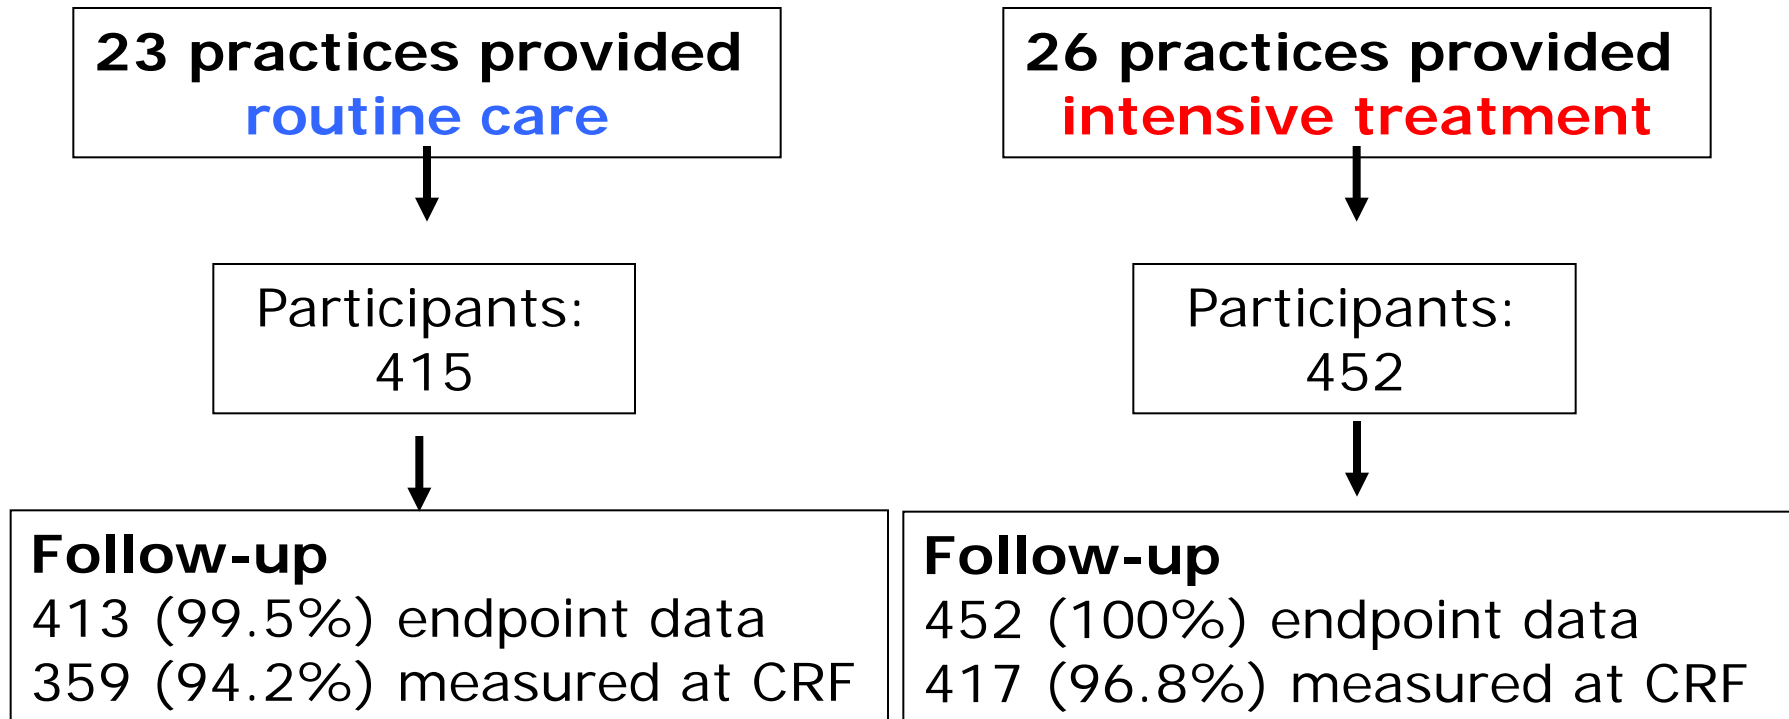

# 4. Study results

# Results in context

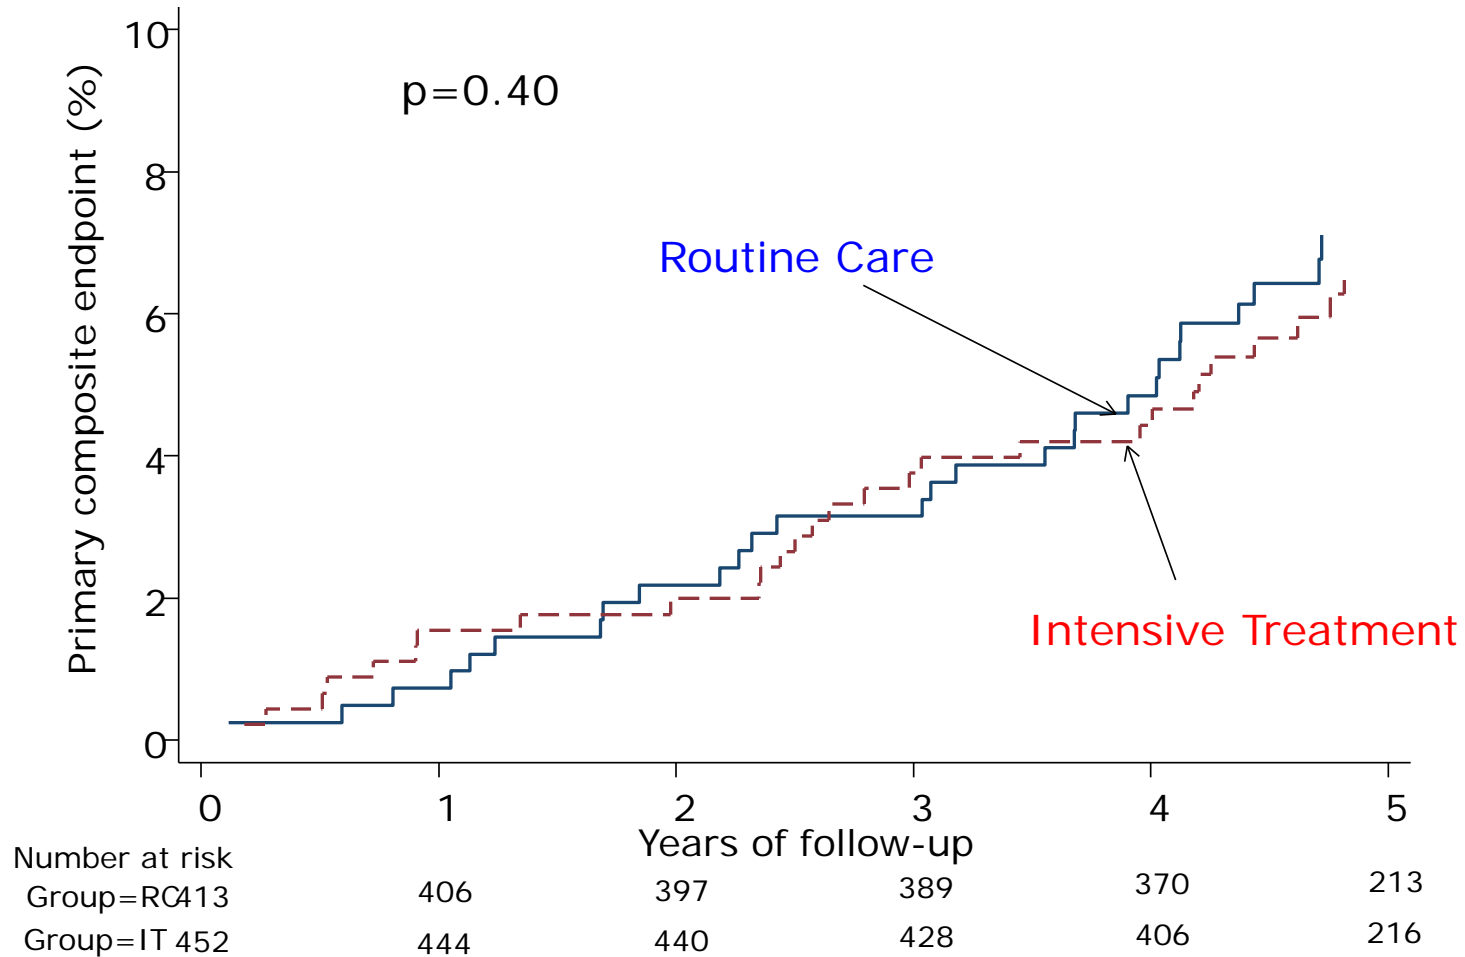

# Results in context

# Results in context

# Chance of having a heart attack or stroke

# *ADDITION-Plus* study

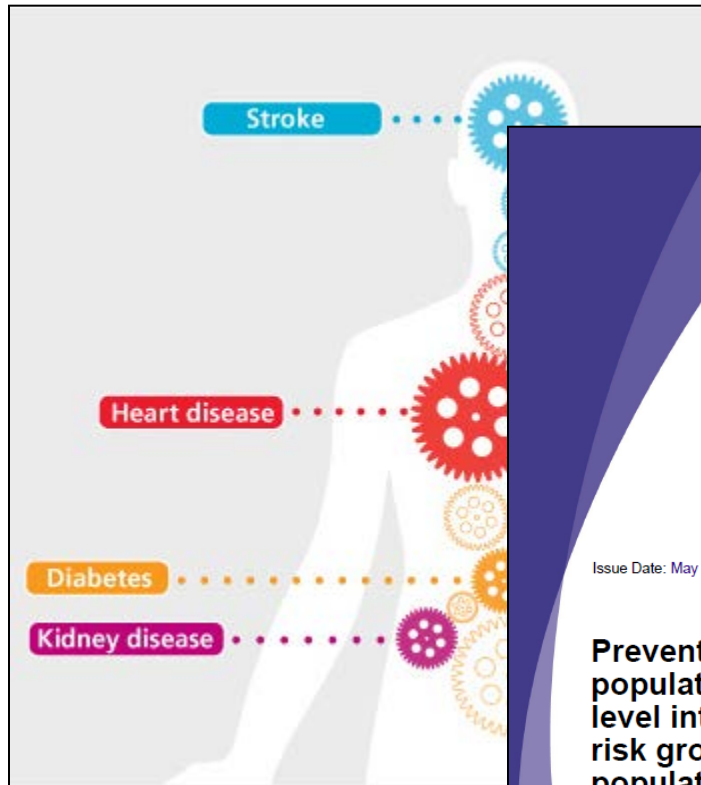

- Does extra support given by lifestyle facilitators improves outcomes in individuals with diabetes?
- Results suggested that the facilitators did not appear to add to what patients and practitioners were already doing
- However, *ADDITION-Plus* participants reported that they appreciated the extra support

# 5. Conclusions

# Conclusions

- The health status of *ADDITION* participants was improved five years after diagnosis e.g. there were important reductions in levels of blood pressure, cholesterol and blood glucose.
- Earlier diagnosis and treatment of diabetes has contributed to lower than expected rates of heart attack and premature death, which is now similar to those in the general population.
